

Log Levels

To set a log:

```
Log.i("Omar's Activity.java", "My Log, 43125.8 Some stuff happens when you run  
this code. Cool.")
```

The first argument is the name of the class that the argument comes from.

The second argument is the text you want to display.

Types of Logs:

```
e(String,String) = error  
w(String,String) = warning  
i(String,String) = information  
d(String,String) = debug  
v(String,String) = verbose
```
